Nationality: Syrian | Languages: Arabic (native), English (C1)

PROFESSIONAL SUMMARY

Senior Full-Stack & DevOps Engineer with 6+ years building and operating business-critical systems: GRC/compliance, ERP, core banking, healthcare, multi-tenant SaaS and multi-vendor e-commerce. Delivers across ASP.NET Core, Laravel, Node.js and React / Next.js, and owns releases end to end with Docker, CI/CD, Terraform, AWS and Azure. Has shipped 30+ production platforms for clients in Saudi Arabia, the USA, Germany, France, the UAE and Japan, and maintains open-source Laravel / Filament packages.

TECHNICAL SKILLS

Languages: C#, PHP, TypeScript, JavaScript, SQL, Bash

Backend: ASP.NET Core, Entity Framework Core, Dapper, Laravel, Filament, Livewire, Node.js, Express, Strapi, REST, GraphQL, JSON:API, WebSockets, queues (BullMQ, Laravel Horizon)

Frontend: React, Next.js (SSR / SSG / ISR), Tailwind CSS, Redux Toolkit, TanStack Query, Angular, i18n and RTL (Arabic / English)

Databases: SQL Server, Oracle, PostgreSQL, MySQL, MongoDB, Redis, Meilisearch

Cloud and DevOps: AWS (ECS Fargate, EC2, RDS, ECR, ALB, S3, Secrets Manager, IAM / OIDC), Azure (VMs, Blob Storage, networking), Terraform, Docker, CI/CD (Bitbucket Pipelines, GitLab CI/CD, GitHub Actions), Nginx, Traefik, Linux hardening, zero-downtime deploys with automatic rollback

Architecture and Security: system design, modular monolith, event-driven design, multi-tenancy, RBAC and claims-based authorisation, OAuth / JWT, OWASP, penetration-test remediation

Testing and Integrations: Pest, PHPUnit, Jest, Vitest, PHPStan, OpenAPI; Stripe, Fatura, webhooks, Firebase Cloud Messaging, Claude API

WORK EXPERIENCE

Senior Full-Stack & DevOps Engineer | T-NEX GmbH | Germany (Remote)

Apr 2026 - Present

German software company building compliance (GRC), AI-powered business tools and SaaS products.

- Designed a config-driven UI engine (React + ASP.NET Core) that renders nested business processes from JSON, cutting new-form development time by ~70%.
- Built an RBAC system for three governance lines with dynamic role-to-resource mapping and claims-based authorisation.
- Developed a workflow and approval module for the asset lifecycle (programs, contracts, BIA, RIA) with automated due-date and status alerts.
- Engineered a reporting subsystem (risk matrices, protection-needs and outsourcing reports) and an OLAP-style data cube for self-service analysis.
- Built REST APIs and import / export pipelines over Oracle and SQL Server (Dapper / EF Core) for integrations and system migration; optimised queries on hierarchical GRC data.
- Led security hardening (input validation, encryption at rest and in transit) and coordinated regular penetration testing.
- Provisioned AWS infrastructure with Terraform (ECS Fargate, RDS SQL Server, ALB, ECR, Secrets Manager, keyless OIDC deploys), shipped via Bitbucket Pipelines with immutable images and health-checked automatic rollback; rolled out a dedicated client tenant in the AWS Singapore region.

Stack: C#, ASP.NET Core, EF Core, Dapper, React, Next.js, SQL Server, Oracle, Docker, AWS, Azure, Terraform, Bitbucket Pipelines

Full-Stack Developer | Azurreo | Paris, France (Remote)

Jun 2025 - Apr 2026

Global telecom-outsourcing and technical services company.

- Owned the internal tool suite that 8 teams rely on to communicate, coordinate work and generate invoices.
- Designed and built a real-time notification system (WebSockets) used across all internal tools.
- Led the modernisation of the tool suite: framework and dependency upgrades, refactoring and bug fixing.
- Containerised the tools with Docker and replaced manual releases with CI/CD pipelines running automated tests and deployments.
- Ran the tools' Azure and AWS environments: virtual machines, storage, access control, backups and monitoring.

Stack: PHP, Laravel, React, MySQL, WebSockets, Docker, CI/CD, Azure, AWS

Full-Stack Developer | Reterra | Remote

Jan 2025 - Jun 2025

Prop-tech company building real-estate management solutions.

- Shipped features end to end (APIs, database and UI) on the core real-estate platform and built companion mini-CMS and mini-ERP modules.
- Provisioned the development, staging and production environments on AWS (EC2, RDS, S3) with Docker and Nginx, and added CI/CD, backups and monitoring.

Freelance Senior Full-Stack & DevOps Engineer | Self-employed | Remote

Feb 2021 - Present

Part-time delivery alongside full-time roles for clients in Saudi Arabia, the USA and Syria.

- **Multi-vendor e-commerce group (Saudi Arabia):** built and run 12+ online stores on the Laravel-based Aimeos framework, then re-platformed them to headless: one multi-site Aimeos backend (JSON:API / GraphQL) and one multilingual Next.js storefront released to 16 brand targets by a GitLab CI/CD fan-out pipeline, with Fatura payments and stock-syncing webhooks.
- **Healthcare websites (USA):** sole developer of Strapi + Next.js / TypeScript websites for 8+ clinics and practices; cut CSS payload by 57% (906 KB to 389 KB), added ISR caching, technical SEO (hreflang, JSON-LD) and security headers, and patched CVE-2025-66478 across all sites within days of disclosure.
- **DevOps:** Dockerised every client stack and built GitLab CI/CD pipelines that back up the database and uploads before each release and roll back automatically on failure; administer the Linux VPS fleet (Nginx, PM2, SSL).
- **Asraa (Saudi Arabia):** bilingual Laravel + Filament project-management platform with Kanban, workflow stages, a dynamic form builder, analytics dashboards and HR modules (payroll, attendance, contracts).
- **Medboss:** Laravel REST API (~100 endpoints) for a medical exam-prep platform, plus a React + TypeScript student app and React admin dashboard.

Stack: PHP, Laravel, Filament, Aimeos, Strapi, Next.js, React, TypeScript, MySQL, Docker, GitLab CI/CD, Nginx, Linux

Full-Stack Developer | Prokodors | UAE (Remote)

Apr 2023 - Oct 2023

- Built the core of the company's custom CMS, the foundation for client websites and the company's own site.
- Delivered features for an airport management system, improved technical SEO across client sites, and managed the Linux staging servers and deployments.

Full-Stack Developer | RemoColla (SMA Group) | Tokyo, Japan (Remote)

Aug 2021 - Nov 2022

- Delivered 32 ERP modules (user management, attendance and more) and a central platform for managing multiple ERP instances.
- Built REST APIs (Yii2, JWT) for a pharmaceutical manufacturer, with Excel reporting and barcode generation, plus Angular front ends and Chrome extensions.

Backend Developer | Automata4 | Aleppo, Syria

Aug 2020 - Feb 2021

- Built services for a core banking system under financial-sector security and reliability constraints, and for hospital and university ERP systems.

OPEN SOURCE AND PRODUCTS

- **Filament Sitemap Generator** and **Filament Scout Manager:** Laravel / Filament plugins listed on filamentphp.com, with Pest tests, PHPStan and GitHub Actions CI. Also **Filament Multitenant Plugin** and **Laravel Route Tracker**.
github.com/Muhammad-Nawlo
- **AutoDeploy (own product):** AI deployment platform (Next.js, BullMQ, PostgreSQL, Docker, Traefik, Azure) that detects an app's stack, generates hardened Dockerfiles and serves it on HTTPS; uses the Claude API to diagnose failed builds.
- **Multi-tenant SaaS e-commerce (own product):** Laravel 12 + Filament modular monolith with a database per tenant, Stripe subscription billing and an event-driven financial ledger.

EDUCATION

Bachelor of Informatics Engineering (Software Engineering) | University of Aleppo, Syria | 2019 - 2024 | Grade: 79.8%

TRAINING

MCSA Windows Server Administration (New Horizons) | CCNA networking coursework (Cisco) | Google IT Support

VOLUNTEERING

IT Coach | University of Aleppo | Oct 2023 - Present: teach students networking, cybersecurity awareness and web development.
