

Muhammad Nawlo

Senior Full-Stack & DevOps Engineer | .NET | Laravel | Node.js | React / Next.js | AWS & Azure

Riyadh, Saudi Arabia | +966 560 637 563 (WhatsApp) | eng.muhammad.nawlo.it@gmail.com

linkedin.com/in/muhammad-nawlo | github.com/Muhammad-Nawlo | muhammad-nawlo.github.io/my-portfolio

Nationality: Syrian | Languages: Arabic (native), English (C1)

PROFESSIONAL SUMMARY

Senior Full-Stack & DevOps Engineer with 6+ years of continuous experience designing, building and operating business-critical systems end to end: GRC/compliance platforms, ERP and project management, core banking, healthcare, multi-tenant SaaS, headless CMS and multi-vendor e-commerce. Delivers across the full stack (C# / ASP.NET Core, PHP / Laravel, Node.js, React / Next.js, TypeScript) and owns the full delivery lifecycle: containerisation with Docker, CI/CD pipelines (Bitbucket, GitLab, GitHub Actions, Jenkins), infrastructure as code with Terraform, cloud operations on AWS and Microsoft Azure, Linux server hardening, backups, monitoring and zero-downtime releases with automatic rollback. Has shipped and run 30+ production websites and platforms for clients in Saudi Arabia, the USA, Germany, France, the UAE and Japan, publishes open-source Laravel/Filament packages, and builds LLM-powered tooling on the Claude API. Native Arabic speaker, fluent in English, comfortable leading conversations with business stakeholders and engineering teams.

TECHNICAL SKILLS

Languages: C#, PHP, JavaScript, TypeScript, SQL, HTML5, CSS3 / SASS, Bash

Backend: ASP.NET Core (.NET), Entity Framework Core, Dapper, Laravel, Filament, Livewire, Laravel Sanctum / Passport, Horizon, Reverb, Scout, Yii2, Node.js, Express.js, Strapi (headless CMS), Aimeos e-commerce, REST APIs, GraphQL, JSON:API, WebSockets, Microservices and API Gateway, Background Jobs and Queues (BullMQ, Laravel Queues)

Frontend: React, Next.js (App Router, SSR / SSG), Angular, Redux Toolkit, Zustand, TanStack Query, React Hook Form, Zod / Yup, Tailwind CSS, shadcn/ui, Radix UI, Ant Design, Bootstrap, Alpine.js, i18n (next-intl, i18next, RTL), config/JSON-driven UIs, Vite, Webpack

Databases and Search: SQL Server, Oracle, PostgreSQL (Neon), MySQL, MongoDB (Mongoose), Redis, SQLite, Drizzle ORM, Meilisearch, query optimisation for hierarchical data, reporting and OLAP-style data cubes

Cloud and DevOps: AWS (ECS Fargate, EC2, RDS, ECR, ALB, S3, CloudWatch, Secrets Manager, IAM / OIDC), Microsoft Azure (Virtual Machines, Blob Storage, Azure CLI, networking / NSG), Terraform, Docker, Docker Compose, CI/CD (Bitbucket Pipelines, GitLab CI/CD, GitHub Actions, Jenkins), zero-downtime deploys with automatic rollback, Nginx, Traefik, PM2, Linux (Ubuntu) server administration and hardening, Let's Encrypt / SSL, automated backups and restore, monitoring and alerting, cloud-init, Cloudflare, multi-arch image builds (Buildx), Docker Hub / ECR registries

Architecture and Security: System design, modular monolith / bounded contexts, event-driven design, multi-tenancy (database-per-tenant), SaaS subscription billing, RBAC and claims-based authorisation, JWT / OAuth, workflow and approval engines, secure coding (OWASP, input validation, encryption at rest and in transit), penetration-test remediation, GDPR data export

Integrations: Stripe, Fatura and Omnipay payment gateways, webhooks, Firebase Cloud Messaging, Google APIs, Claude / LLM APIs, Excel import / export, PDF and QR / barcode generation, SEO (technical SEO, XML sitemaps, structured metadata)

Testing and Quality: Pest, PHPUnit, Jest, Vitest, Supertest, Codeception, PHPStan / Larastan, Rector, ESLint, Prettier, Laravel Pint, Swagger / OpenAPI, Postman

Practices and Tools: Git (GitHub, GitLab, Bitbucket), Agile / Scrum, code review, technical documentation, pnpm / Turborepo monorepos, AI-assisted development (Claude Code, Cursor)

WORK EXPERIENCE

Senior Full-Stack & DevOps Engineer | T-NEX GmbH | Germany (Remote)

Apr 2026 - Present

German software company building compliance (GRC), AI-powered business tools and SaaS products.

- Designed a config-driven UI engine (React + ASP.NET Core) that renders nested business processes from JSON, cutting new-form development time by ~70%.
- Built a scalable RBAC system for three governance lines (asset managers, second line, third line) with dynamic role-to-resource mapping and claims-based authorisation.
- Developed a workflow / approval module for the asset lifecycle (programs, contracts, BIA, RIA) with automated e-mail alerts for due dates and status changes.
- Engineered a reporting subsystem (risk matrices, protection-needs and outsourcing reports) plus an OLAP-style data cube for self-service analysis.
- Built REST APIs and configurable import / export pipelines over Oracle and SQL Server (Dapper / EF Core) for integrations, batch processing and system migration; optimised queries on hierarchical GRC data.
- Led security hardening (input validation, encryption at rest and in transit) and coordinated regular penetration testing.
- Own production operations: Dockerised .NET + Next.js services behind Nginx, Bitbucket Pipelines CI/CD with immutable image tags and health-checked automatic rollback, and a manual, gated production release pipeline.

- Provisioned and operate AWS infrastructure with Terraform (ECS Fargate, RDS SQL Server, ALB, ECR, Secrets Manager, keyless OIDC deploys) and manage the company's Azure environments; rolled out a dedicated client tenant and relocated it to the AWS Singapore region.

Stack: C#, ASP.NET Core, EF Core, Dapper, React, Next.js, SQL Server, Oracle, Docker, AWS, Azure, Terraform, Bitbucket Pipelines, Nginx

Full-Stack Developer | Azurreo | Paris, France (Remote)

Jun 2025 - Apr 2026

Global telecom-outsourcing and technical services company (15+ years in telecommunications).

- Developed new features and resolved production issues in the company's main platform, from requirements and implementation through code review, testing and release.
- Maintained and extended the internal tool suite used by 8 teams to communicate, coordinate work and generate invoices.
- Designed and built a real-time notification system used across the company's internal tools.
- Led the upgrade and modernisation of the internal tools: framework / dependency upgrades, refactoring and bug fixing.
- Containerised the internal tools with Docker and introduced CI/CD pipelines for automated testing and deployment, replacing manual releases.
- Managed the tools' cloud environments on Azure and AWS, including virtual machines, storage, access control, backups and monitoring.
- Acted as the go-to engineer for internal teams, triaging and resolving reported issues and feature requests.

Stack: PHP, Laravel, JavaScript, React, MySQL, WebSockets, Docker, CI/CD, Azure, AWS, Linux

Full-Stack Developer | Reterra | Remote

Jan 2025 - Jun 2025

Prop-tech company building real-estate management solutions.

- Implemented new features end to end (backend APIs, database and UI) in the main real-estate management platform, and diagnosed and fixed production bugs.
- Built companion mini-CMS and mini-ERP modules integrated with the core platform.
- Provisioned and managed the development, staging and production environments on AWS (EC2, RDS, S3) with Docker, Nginx and SSL.
- Built CI/CD pipelines for automated builds and deployments, and set up backups and monitoring for the production platform.

Freelance Senior Full-Stack & DevOps Engineer | Self-employed | Remote

Feb 2021 - Present

Continuous freelance delivery alongside full-time roles: ERPs, e-commerce, CMS platforms, SaaS and cloud / server operations for clients in Saudi Arabia, the USA and Syria.

- **Multi-vendor e-commerce group (Saudi Arabia):** built and run a group of 12+ online stores (Al-Hasnaa, Oriental Steps, Sofia's Stores, Mtgry, Al-Mulazim, Sham Food Store, Sandal Shoes and more) on the Laravel-based Aimeos framework, with a reusable Aimeos extension for per-store theme and configuration.
- **Headless re-platform:** migrated the group to a headless architecture: one multi-site Aimeos backend (JSON:API / GraphQL) serving every brand, and a single multilingual Next.js storefront codebase released to 16 brand-specific production targets by a GitLab CI/CD fan-out pipeline. Integrated the Fatora payment gateway with webhooks that sync payment status and stock, and built multi-site order dashboards, tax calculation and blog management.
- **Healthcare websites (USA):** sole developer, front end, back end and deployment, of headless CMS websites (Strapi + Next.js / TypeScript) for 7+ clinics in the Hermosa medical group (urgent care, autism therapy, allergy, endocrinology, cosmetic) and for Tarabichi Hip & Knee, an orthopaedic surgery practice (appointment booking, surgeries catalogue, flip-book patient booklet, blog, gallery).
- **Performance, SEO and security:** cut CSS payload by 57% (906 KB to 389 KB) and added ISR caching and image optimisation. Implemented technical SEO (canonicals, hreflang, localised metadata, JSON-LD, sitemaps) and HTTP security headers, and patched the critical Next.js vulnerability CVE-2025-66478 across client sites within days of disclosure.
- **DevOps for client platforms:** containerised every Strapi + Next.js stack with Docker Compose and built GitLab CI/CD pipelines that deploy over SSH. Deploy scripts back up the database, uploads and images before each release and roll back automatically on failure. Administer the Linux VPS fleet (Nginx, PM2, SSL) and migrated client platforms to new servers with automated database backups.
- **Asraa project management platform (Saudi Arabia):** built a Laravel + Filament platform for projects, tasks, departments and workflow stages with confidentiality levels. Includes a Kanban board, a dynamic form builder with templates, role-based policies, a geo-location picker and analytics dashboards (progress, overdue and department activity), plus HR modules (payroll, loans, attendance, assets, contracts). Bilingual Arabic / English.
- **Medboss (medical exam-prep platform):** built the Laravel REST API (~100 endpoints): question banks, quizzes, Excel question import, subscription and activation codes, FCM push notifications, PDF generation and RBAC. Delivered the earlier Node.js / Express / MongoDB version, a React + TypeScript student app and a React + Ant Design admin dashboard.
- **Earlier client work (2021 - 2023):** social-video app backend (Mimic: Laravel, Passport / JWT, FFmpeg, Firebase), a social platform with real-time messaging (Laravel WebSockets), an inventory and accounting system, a restaurant menu dashboard (Roqa), a parking API and Yii2 applications.

Stack: PHP, Laravel, Filament, Aimeos, Node.js, Express, Strapi, Next.js, React, TypeScript, MySQL, MongoDB, Docker, GitLab CI/CD, Nginx, PM2, Linux

Full-Stack Developer | Prokoders | UAE (Remote)

Apr 2023 - Oct 2023

- Developed features for an airport management system.
- Built the core of the company's custom CMS, used as the foundation for client websites and the company's main website.
- Improved technical SEO across client websites and resolved defects in existing projects.
- Managed the Linux staging servers (Nginx, SSL) and the deployment process for client projects.

Full-Stack Developer | RemoColla (SMA Group) | Tokyo, Japan (Remote)

Aug 2021 - Nov 2022

Japanese ICT consulting and software company.

- Developed 32 ERP modules, including user management and attendance management, and built a central platform for managing multiple ERP instances.
- Built REST APIs (Yii2, JWT) for a pharmaceutical manufacturer's operations (Aphamea), including Excel reporting and barcode generation.
- Built Chrome extensions to support client workflows, and Angular front ends backed by PHP APIs.
- Managed the staging server and the Git workflow for the development team.

Stack: PHP, Yii2, Laravel, Angular, TypeScript, MySQL, Chrome Extensions API

Backend Developer | Automata4 | Aleppo, Syria

Aug 2020 - Feb 2021

- Developed new services and features for a core banking system, working within the security and reliability constraints of the financial sector.
- Contributed to ERP systems for hospitals and universities.

OPEN SOURCE

- **Filament Sitemap Generator:** Laravel / Filament plugin that generates XML sitemaps with splitting, news, image and alternate-language entries and search-engine ping. Listed on filamentphp.com. github.com/Muhammad-Nawlo/filament-sitemap-generator
- **Filament Scout Manager:** Filament plugin for managing Laravel Scout search indexes and settings from the admin panel. Listed on filamentphp.com. github.com/Muhammad-Nawlo/filament-scout-manager
- **Filament Multitenant Plugin:** tenant management with custom domains, automatic per-tenant databases and role-based permissions, built on stancil/tenancy and spatie/laravel-permission. github.com/Muhammad-Nawlo/multitenant-plugin
- **Laravel Route Tracker:** middleware package that records hit counts and last-used timestamps for every route, on any filesystem disk (local / S3). github.com/Muhammad-Nawlo/route-tracker
- All packages ship with Pest test suites, PHPStan static analysis and GitHub Actions CI (tests, code style, Dependabot, changelog automation).

SELECTED PROJECTS

- **AutoDeploy, an AI deployment platform (own product)** (TypeScript, Next.js 15, BullMQ, PostgreSQL, Redis, Docker, Traefik, Azure, Claude API): a pnpm / Turborepo monorepo that detects an uploaded app's stack, generates hardened multi-stage Dockerfiles and serves the app on an HTTPS subdomain. An "AI Deploy Doctor" uses the Claude API to diagnose failed builds. Runs on an Azure VM behind Traefik with Let's Encrypt, with automated Postgres backups to Azure Blob, container resource limits, host hardening and monitoring.
- **Multi-tenant SaaS e-commerce (own product)** (Laravel 12, Filament, stancil/tenancy, Stripe, Redis, Horizon): turns my Aimeos e-commerce experience into a self-serve SaaS where merchants subscribe and launch their own store. A modular monolith with a database per tenant. Includes Stripe subscription billing, an event-driven financial ledger and invoicing, multi-currency, multi-location inventory, GDPR export and an OpenAPI-documented API.
- **Residential Complex Management** (Node.js, Express, MongoDB, React, Ant Design): a team-built microservices system (user, real-estate, restaurant, car, services, ads and mail services behind an API gateway) with Firebase notifications and an admin dashboard. github.com/Muhammad-Nawlo/backend-city-management-system
- **Acquisitions SaaS: full DevOps lifecycle** (Node.js, Express, Drizzle ORM, Neon Postgres, Docker, GitHub Actions): SaaS backend run through the complete lifecycle. Multi-stage Docker images with separate dev and prod targets, and ephemeral per-developer database branches (Neon Local) in development. GitHub Actions pipelines lint, format and test (Jest / Supertest), then build multi-arch (amd64 / arm64) images and push them with branch, SHA and timestamp tags. Production hardening includes JWT auth, Arcjet rate limiting and bot protection, Helmet and structured Winston logging.

EDUCATION

Bachelor of Informatics Engineering (Software Engineering)

University of Aleppo, Syria | 2019 - 2024 | Grade: 79.8%

TRAINING & CERTIFICATIONS

CCNA (Cisco networking) coursework

MCSA Windows Server Administration, New Horizons

Google IT Support

VOLUNTEERING

IT Coach | University of Aleppo | Oct 2023 - Present

Teach students computer and networking fundamentals, cybersecurity awareness, and web development with PHP, Python and JavaScript, including CMS platforms and modern frameworks.
